

PERKUP COFFEE SYSTEMS

Plumbed Water Chillers

Fresh Filtered Water from £15.00 per month

If an alien came down to earth and saw us transporting bottles of water all over the country, he would think we were mad.

Why go through all that trouble and expense when nearly every office, warehouse and factory has perfectly good drinking water piped to it.

Why indeed! The bottled water industry has done a remarkable marketing job in convincing the consumer that "bottled water is the elixir of life". The truth can be very different as numerous tests and articles have proven. Bottled water is neither better in quality nor in taste than tap water.

No more heavy bottles to lift with our point of use systems. The water is filtered to remove chlorine, taste and odour from the mains water resulting in a continuous supply that consumers find hard to distinguish from traditional bottles of water.

The units have two taps, one for chilled water for drinking at approximately 6 degrees and the other for the supply of filtered water to enhance the taste of hot drinks made with kettles or coffee makers.

Free Plumbing to within 5 metres of the supply

Minimum contract term of 36 Months

Quarterly rental charge

Quarterly sanitising

Six monthly filter change
